
interposer adapter: WHERE attachment may land
intm4tm2
another substrate
interconnect adapter: HOW DENSELY, by what method
vendorx_microbump
ihp_cupillar
same rule decks, verdict determined by the pair
same rule decks, verdict determined by the pair
the shipped demonstration: same IHP interposer geometry, retightened IXN numbers, different verdict on an unchanged layout
same rule decks, verdict determined by the pair
same rule decks, verdict determined by the pair
unchanged in every cell to the right
8_1_assembly.drc
the ASM rules
8_2_interconnect.drc
the IXN rules
no layer number, no PDK name, no technology assumption
a parameter pack: sets IXN_spacing, IXN_pitch, IXN_pad_size
MAY narrow interconnect_region
declares no fabrication layer at all
declares chiplet_attachment_input as a KLayout layer expression
MAY override drc_rules entries
sets no IXN parameter of any kind
with no interconnect adapter and no per-method file the axis is simply absent: the evaluated source, the executed checks and the emitted report are identical to the interposer-only deck
