what upstream KiCad assumes

locked-item shadow margin from silkscreen width
about 0.15 mm

32-bit squared distance wraps negative beyond
46 µm

dialog `minSize`, finest upstream grid preset
0.01 mm

`MINIMUM_LINE_WIDTH_MM`
0.005 mm

`GEOMETRY_MIN_SIZE`
`MINIMUM_ERROR_SIZE_MM`
0.001 mm

zone filler pruning epsilon
1 µm, fixed

1 nm · 10 nm · 100 nm · 1 µm · 10 µm · 100 µm · 1 mm — length

where the fork puts them

interposer drawing grid,
5 nm

all four hardcoded floors
0.00001 mm, that is 10 nm

five grid presets added below the upstream 0.01 mm floor: 5 µm, 1 µm, 100 nm, 10 nm, 1 nm

smallest interposer features, 0.2 µm (thin metals) to 2 µm (TopMetal2)

smallest PCB feature, roughly 0.1 mm and up

nearly three orders of magnitude

two of these stop being lengths at all: the zone filler prunes with ten per cent of the half zone minimum width rather than a constant, and squared distances widen to `int64`, so the 46 µm limit disappears rather than moving down the axis
