dimensions.thickness
extends upward
U1 seating plane, position.z
= 57.83
20 µm apart in z:
same interposer,
different
interconnect
method
U2
U2 seating plane, position.z
= 37.83
SnAgCap 16
CuPillar 28
total_height() = 44
VendorXBumpCap 6
VendorXBumpCu 18
total_height() = 24
passivation rises above
the attachment surface
the attachment surface is NOT the
substrate maximum z; deriving the
die gap from an outline maximum
disagrees with total_height() by
the passivation height
attachment_surface_z
= 13.83 (TopMetal2
bottom 10.83 plus its
3.00 thickness)
interposer body, silicon
substrate plus BEOL
dimensions.thickness extends downward
from the attachment surface
