
z (µm)
U1 seating plane,
position.z = 54.8103
54.8103
U1
dimensions.thickness
extends upward
passivation rises above the attachment surface
SnAgCap 16
20 µm apart in z: same interposer, different interconnect method
total_height() = 44
34.8103
U2
U2 seating plane,
position.z = 34.8103
VendorXBumpCap 6
the attachment surface is NOT the substrate maximum z; deriving the die gap from an outline maximum disagrees with total_height() by the passivation height
CuPillar 28
VendorXBumpCu 18
total_height() = 24
10.8103
interposer body, silicon substrate plus BEOL
dimensions.thickness
extends downward from the attachment surface
attachment_surface_z = 10.8103
(the top of TopMetal2)
0
U1, connection: cupillar_opt1
U2, connection: vendorx_microbump
z_die = mounting_surface + connection.total_height()
